

Liquid Plant Fertiliser

Advice

For excellent results:

Use good quality compost or soil with a 30%–50% mix of perlite.

A complete balanced nutrient solution, especially formulated for AutoPot.

Contains pure mineral salts and rich organic plant acids for optimal plant performance.

Directions for use:

Mix with clean water at 5 ml per litre. The standard easy2grow tank (47 litres) will require 250 ml to make up this solution.

Supply to plants throughout the season. Heavily fruiting plants such as tomatoes will benefit from a stronger solution at 10 ml per litre after the second truss has formed.
